

Event Registration Portal

A web-based system for online event booking and participant management

Project Overview

What It Does

Users browse and register for events online while administrators manage participants and event details efficiently

Perfect For

- College fests and competitions
- Workshops and seminars
- Conferences and corporate events

Key Strength

Combines frontend design with backend database functionality in a real-world application

Technology Stack Options

Beginner Path

- HTML & CSS
- JavaScript
- PHP backend
- MySQL database

Easiest for college projects

Intermediate Path

- React or Bootstrap
- Node.js or PHP
- MySQL storage

More modern interface

Python Path

- Flask or Django
- SQLite or MySQL

Clean, elegant code

User Features

01

Browse Events

View upcoming events with dates, times, venues, and fees

02

Event Details

Complete information about each event including requirements

03

Quick Registration

Simple form to submit name, email, phone, and college details

04

Confirmation

Instant message and optional email with registration details

05

Ticket Download

Download digital ticket or participant ID for event check-in

Admin Dashboard

Secure Login

Protected admin access with username and password

Event Management

Add, edit, or delete events as needed

Participant Tracking

View registered users and export data to CSV or Excel

Registration Control

Open or close registration for any event

Database Structure

1

Events Table

- event_id (primary key)
- event_name
- date and time
- venue location
- registration fee

2

Participants Table

- id (primary key)
- name and contact info
- email address
- phone number
- college name
- event_id (foreign key)

3

Admin Table

- username
- hashed password

Page Architecture

Home Page

Website landing and navigation

Events List

Display all available events

Event Details

Complete event information

Registration

User input form

Admin Panel

Management dashboard

Confirmation

Success message

Enhancement Features

Boost your grade with 2-3 of these advanced features:

QR Code Tickets

Generate unique QR codes for each participant for quick event check-in

Email Confirmation

Automated email system sends registration details instantly after signup

Payment Integration

Mock payment gateway for fee collection (great for demonstration)

Search & Filter

Find events by date, category, or venue with responsive search functionality

Mobile Responsive

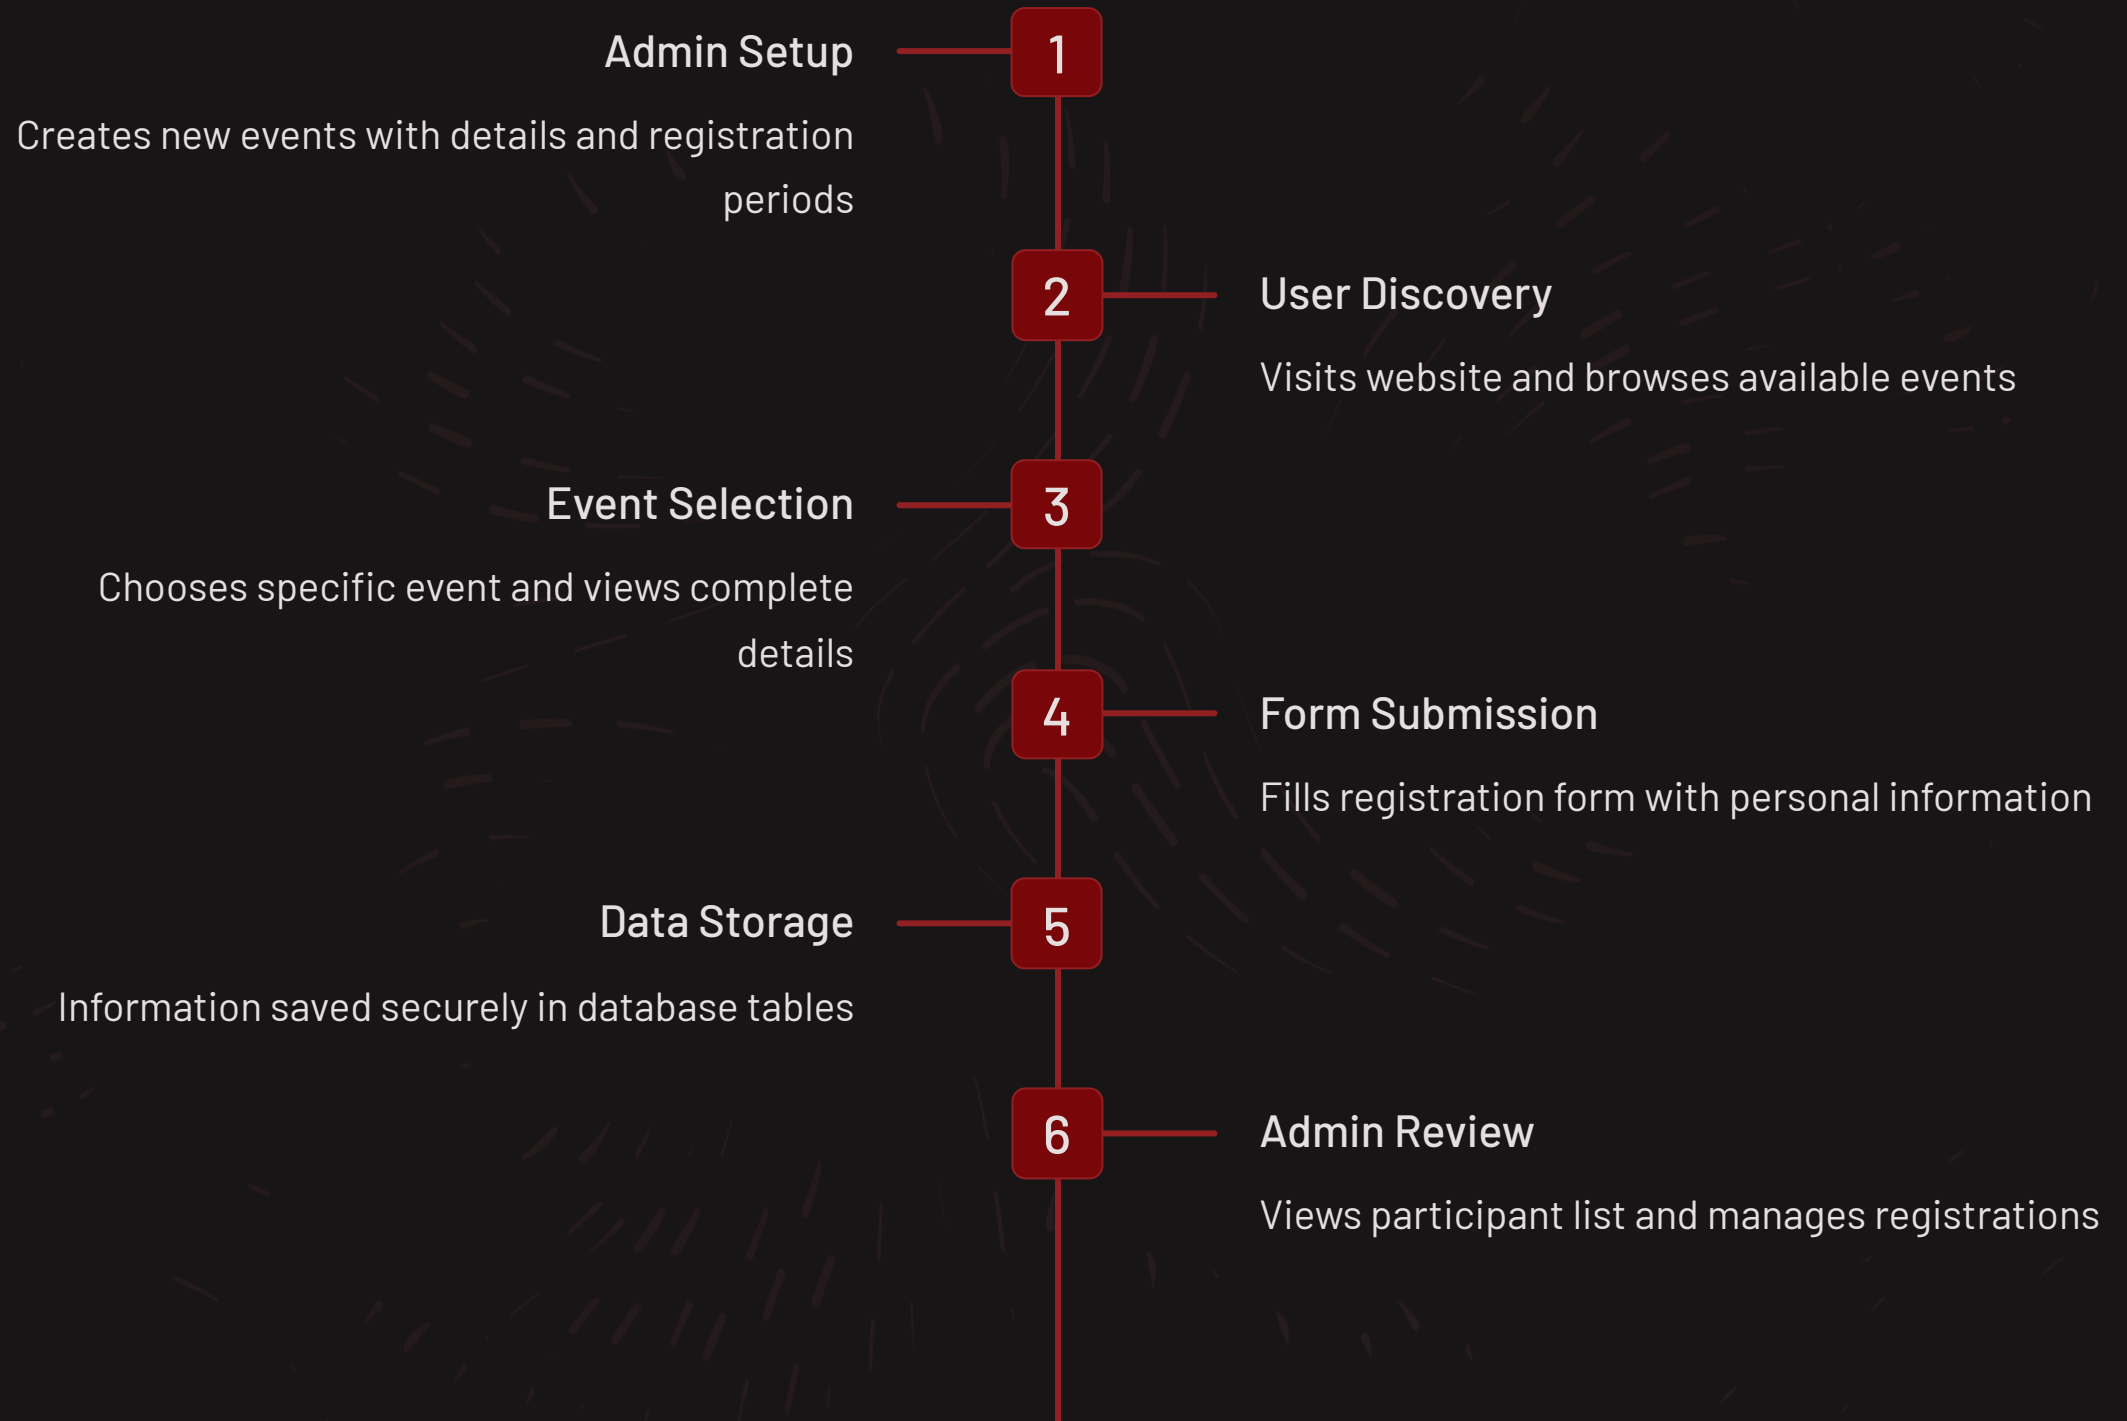

Works perfectly on phones, tablets, and desktop screens

Certificate Download

Participants can download participation certificates after events

Project Flow

Why This Project Works

Real-World Application

Solves actual problems colleges and organizations face daily

Database Integration

Complete CRUD operations demonstrate backend skills

Full-Stack Development

Combines frontend design with backend logic seamlessly

Easy Demonstration

Clear user flow makes viva explanation straightforward

Expandable Features

Start simple, add enhancements for higher marks

Perfect for Mini Projects

Teachers appreciate the complete package from design to implementation
